Lawrence Degoma

lawrencedegoma02@gmail.com | Glendale, CA | (818) 245-0308 | www.linkedin.com/in/lawrencedegoma | https://lawrencedegoma.vercel.app

EDUCATION

California State University of Long Beach – College of Engineering *Expected Dec 2026*
Bachelor of Computer Science

Pasadena City College *June 2024*
A.A. Engineering and Technology | A.S. Mathematics | A.S. Natural Science

SKILLS

Languages: Python, C++, JavaScript, TypeScript, Swift, C
Frameworks and Libraries: React, Nest.js, Node.js, Tailwind, OpenCV, MediaPipe
Databases: MongoDB, DynamoDB, PostgreSQL, Firebase
Developer Tools: Docker, Git, GitHub, Linux, WebSockets, REST APIs
Domains: Human-Machine Interfaces (HMI), Real-Time Interaction Systems, Computer Vision, Platform Engineering

PROJECTS

SharkPark - CSULB Parking Intelligence App | React Native, NestJS, PostgreSQL | Full-Stack Mobile Developer
https://sharkpark.app/

- Built real-time parking occupancy detection system, designed geofence-based entry/exit tracking to attribute lot traffic
- Developed full mobile frontend in React Native including an interactive live map and real-time shuttle tracking via WebSocket
- Engineered the geofencing integration layer bridging React Native Background Geolocation with the occupancy event API
- Configured production build tooling and error telemetry, integrated Sentry for crash and exception reporting

RateMyProf for GCC | Chrome Extension | Javascript, Chrome MV3, GraphQL
https://chromewebstore.google.com/detail/ratemyprof-for-gcc/ppnijakoikpoepilpldnbfgdjemhlnca

- Shipped a Chrome extension adopted by 250+ students that overlays RateMyProfessor ratings directly on college course catalog
- Implemented a fuzzy name-matching algorithm combining Jaro-Winkler and Levenshtein distance to resolve inconsistency errors
- Designed multi-step GraphQL search fallback chain with in-memory caching to maximize match rates while minimizing API calls
- Used a MutationObserver to handle PeopleSoft's dynamic AJAX-loaded DOM, with iframe injection to detect student portals

HandtrackerHUD | Python, OpenCV, MediaPipe
https://github.com/lawrenceDegoma/HandTrackerHUD

- Designed a real-time human-machine interface translating hand gestures and voice input into control signals
- Implemented landmark tracking, gesture classification, and latency-aware interaction pipelines
- Integrated Spotify Web API and macOS window capture to enable hands-free system control
- Developed a custome HUD overlay with perspective transforms and dynamically rendered UI components
- Tuned interaction feedback loops to prioritize responsiveness, ergonomics, and intuitive control

MacMultipeer | Swift, MultipeerConnectivity
https://github.com/lawrenceDegoma/MacMultipeer

- Built a cross-platform screen sharing and control system across macOS and iOS using MultipeerConnectivity
- Implemented system-level permission handling with ScreenCaptureKit, TCC workflows, and sandboxed app configs
- Engineered error handling and fallback logic supporting modern ScreenCaptureKit and legacy CMIO capture paths
- Configured secure Xcode build pipelines including entitlements and code signing for App Sandbox compliance
- Built a permission state caching system using UserDefaults to reduce repeated system prompts to improve UX

Bartending Ordering System | React, Firebase
https://lawandpour-khaki.vercel.app/

- Engineered a real time ordering system to streamline operations by queuing customer drinks to a receiver interface
- Designed a consistent order queue system synchronized across devices using Firebase real-time updates
- Built a responsive React and Tailwind frontend optimized for fast input during live events
- Optimized backend logic for speed, reliability, and scalability under bursty traffic conditions
- Deployed the system for live use at private events, improving bartender workflow efficiency

Raspberry Pi Photo Booth | Python, Raspberry Pi, Linux, Image Processing
https://github.com/lawrenceDegoma/Photobooth

- Engineered an embedded photo booth application integrating camera capture and image processing on Raspberry Pi
- Developed an image processing pipeline to generate print-ready photo strips from captured images
- Designed a hardware-integrated user interface coordinating camera operations, capture sequences, and printing workflow
- Implemented automated application startup and peripheral management for standalone opertation

PROFESSIONAL EXPERIENCE

Ishkaster Media *Aug. 2024 – Jan. 2025*
Full Stack Engineer Intern

- Developed a dynamic marketplace, building both frontend and backend systems
- Utilized APIs from Amazon and Best Buy to populate the marketplace with real-time data
- Designed a user friendly UI using Shopify frontend, creating a smooth user experience
- Built backend systems in Node.js to manage API integrations
- Implemented data validation and security measures to ensure site reliability

Starbucks *Sep. 2021 – Present*
Barista

- Prepared a variety of beverages from a menu of 60+ items, ensuring consistent quality and customer satisfaction
- Fostered a positive and welcoming atmosphere for customers and team members, enhancing overall morale
- Led and coordinated a team of baristas during high-traffic periods, optimizing workflow and minimizing delays
- Mentored new hires and provided ongoing support to veteran staff, contributing to a strong, cohesive team
- Cultivated a community-centric environment, positioning the store as a "third place" for customers
